Carillon Scout Mid Cap Fund
An active mid cap fund for changing markets
DON’T MISS OUT ON MID CAPS
The Russell Midcap® Index consists of companies with market caps between roughly $2 billion and $35 billion. Mid-caps include companies in a range of industries from medical device manufacturers to restaurant chains. Investors with allocations to large, small/mid-cap (SMID) or small-cap equities may own some stocks in the Russell Midcap Index, but may be missing out on the full potential of mid-cap stocks.

GROWTH POTENTIAL
Mid-cap companies can combine some of the best attributes of larger and smaller companies. The ability to help limit risk in down markets is generally associated with large-cap stocks, while the potential to perform competitively in up markets is generally associated with small-caps. The mid-cap space has demonstrated the potential to do a bit of both. (See Chart 1)

RISK/RETURN CHARACTERISTICS
Investors may be missing mid-cap stocks’ potential to add absolute returns and portfolio diversity. Investors must also consider risk-adjusted returns. Mid-caps can offer an attractive return relative to their risk. It may not be necessary to take the risks associated with small-caps to see similar returns. (See Chart 2)

OVERLOOKED OPPORTUNITY
While mid-cap stocks represent 27 percent of the overall market,¹ they account for only about 11 percent of assets in U.S. domestic mutual funds. Only $799 billion of the roughly $7.3 trillion in total assets invested in U.S. open-ended equity mutual funds were in the mid-cap space.² (See Chart 3)

Investors may believe they are adequately invested in mid-caps if they have exposure to stocks in the Russell 1000® Index. However, the 200 or so top large-cap stocks in the Russell 1000® Index can eclipse the mid-cap holdings in their weightings. Investors seeking mid-cap exposure should not rely on combined allocations across market capitalizations to provide it. Investing with a dedicated active mid-cap manager can be an effective way to gain exposure to these stocks’ potential benefits.

CARILLON SCOUT MID CAP FUND
For those seeking an active fund that aims to beat the benchmark in either bull or bear markets, the Carillon Scout Mid Cap Fund’s approach may align with investors’ long-term goals. Our investment team seeks solid companies trading at a discount that stand a good chance of increasing in value because of a prevailing economic trend or fundamental company attribute. During a bear market, the investment team employs a more cautious approach in an attempt to minimize investors’ downside risk. In a bull market, our team may use higher target prices to hold a stock longer, in search of increased returns.

A HISTORY OF BEATING THE BENCHMARK
Whether during the negative equity markets of 2008, 2011, and 2015 or positive markets of 2009, 2013, and 2017, the Scout Mid Cap Fund has proven capable of outperforming its benchmark on an absolute basis.

POSITIONING FLEXIBILITY
The Fund’s investment team has the flexibility to invest in value, core, and growth stocks depending on where the team recognizes the best opportunities. The management team monitors holdings using more than 150 economic and sentiment indicators. Since a company’s fundamentals and macroeconomic environment are ever-changing, this approach aims to provide the investment team with a more complete picture to best position the portfolio. This active approach may potentially provide investors with competitive long-term results.
The performance quoted represents past performance and does not guarantee future results. Investment return and principal value of an investment will fluctuate so that shares, when redeemed, may be worth more or less than their original cost. Performance at offer reflects a front-end sales charge of 4.75 percent for Class A shares; a contingent deferred sales charge of 1 percent for Class C share sales made earlier than one year after purchase. Performance data quoted reflects reinvested dividends and capital gains. Returns of less than one year are not annualized. Current performance may be lower or higher than the performance quoted. Performance data current to the most recent month-end may be obtained by calling 1.800.421.4184 or visiting carillontower.com.

Performance "at NAV" assumes that no front-end sales charge applied or the investment was not redeemed. Performance "at offer" assumes that a front-end sales charge applied to the extent applicable.

Class I and R shares have no sales charge and are only available to certain investors. See the prospectus for more information.

*The Carillon Family of Funds will convert class C share accounts that are more than 10 years old to class A shares on the third of each month. Shareholders may continue to purchase shares in either class, but will be required to pay a sales charge on new purchases of Class A shares.

Risk Considerations

Mid-cap and small-cap stocks may temporarily fall out of favor or perform poorly relative to other types of investments. While stocks of mid-cap companies may be slightly less volatile than those of small-cap companies, they still involve substantial risk.

Mid-cap and small-cap stocks may temporarily fall out of favor or perform poorly relative to other types of investments. While stocks of mid-cap companies may be slightly less volatile than those of small-cap companies, they still involve substantial risk.

Real Estate Investment Trusts (REITs) may be affected by economic conditions including credit risk, interest rate risk and other factors that affect property values, rents or occupancies of real estate.

Foreign investments present additional risks due to currency fluctuations, economic and political factors, government regulations, differences in accounting standards and other factors. Investments in emerging markets involve even greater risks. Groups of stocks, such as value and growth, go in and out of favor, which may cause certain funds to underperform other equity funds.

The Fund may, at times, experience higher-than-average portfolio turnover, which may generate significant taxable gains and increased trading expenses, which, in turn, may lower the Fund's return.

Please consider the investment objectives, risks, charges, and expenses of any fund carefully before investing. Call 1.800.421.4184 or your financial professional for a prospectus, which contains this and other important information about the funds. Read the prospectus carefully before you invest or send money.

Large-caps are represented by the Russell Top 200 Index. The Russell Top 200 Index measures the performance of the 200 largest companies in the Russell 3000 Index.

The Russell Midcap® Index measures the performance of the mid-cap segment of the U.S. equity universe. The stocks are also members of the Russell 1000 Index.

Small/Mid (SMID) cap are represented by the Russell 2500™ Index. The Russell 2500™ Index measures the performance of the 2,500 smallest companies in the Russell 3000 Index.

Small-cap are represented by the Russell 2000® Index. The Russell 2000® Index measures the performance of the 2,000 smallest companies in the Russell 3000® Index.

Investors cannot invest directly in an index and unmanaged index returns do not reflect any fees, expenses or sales charges.

Morningstar star ratings information: the information contained herein (1) is proprietary to Morningstar and/or its content providers; (2) may not be copied or distributed; and (3) is not warranted to be accurate, complete or timely. Neither Morningstar nor its content providers are responsible for any damages or losses arising from any use of this information. Funds with at least three years of performance history are assigned ratings from the fund’s three-, five- and 10-year average annual returns (when available) and a risk factor that reflects fund performance relative to three-month Treasury bill monthly returns. Fund returns are adjusted for fees and sales loads. Ten percent of the funds in an investment category receive five stars, 22.5% receive four stars, 35% receive three stars, 22.5% receive two stars and the bottom 10% receive one star. Investment return and principal value will vary so that investors have a gain or loss when shares are sold. Funds are rated for up to three time periods (three-, five-, and 10-years) and these ratings are combined to produce an overall rating. Ratings may vary among share classes and are based on past performance.
