

Carillon Reams Core Bond Fund

SUMMARY PROSPECTUS | 3.1. 2022

Class A CRCBX **Class C** CRCDX **Class I** SCCIX **Class Y** SCCYX **Class R-3** CRCQX **Class R-5** CRC SX **Class R-6** CRCUX **Class RJ RETIREMENT** CRCNX

Before you invest, you may want to review the fund's Prospectus, which contains more information about the fund and its risks. You can find the fund's Prospectus, Statement of Additional Information ("SAI"), shareholder reports and other information about the fund online at <https://www.carillontower.com/our-funds/fund-literature>. You can also get this information at no cost by calling 800.421.4184 or by sending an email to CarillonFundServices@carillontower.com. The fund's Prospectus and SAI, both dated March 1, 2022 as each may be supplemented from time to time, are incorporated by reference into this Summary Prospectus.

Investment objective | The Carillon Reams Core Bond Fund ("Core Bond Fund" or the "fund") seeks a high level of total return consistent with the preservation of capital.

Fees and expenses of the fund | The tables that follow describe the fees and expenses that you may pay if you buy, hold, and sell shares of the Core Bond Fund. **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.** You may qualify for sales discounts if you and your family invest, or agree to invest in the future, at least \$25,000 in the Class A shares of the Carillon Family of Funds. More information about these and other discounts, including through specific financial intermediaries, is available from your financial professional, on page 102 of the fund's Prospectus and on page 53 of the fund's Statement of Additional Information.

Shareholder fees (fees paid directly from your investment):

	Class A	Class C	Class I	Class Y	Class R-3	Class R-5	Class R-6	Class RJ RETIREMENT
Maximum Sales Charge Imposed on Purchases (as a % of offering price)	3.75%	None	None	None	None	None	None	None
Maximum Deferred Sales Charge (as a % of original purchase price or redemption proceeds, whichever is lower)	None (a)	1.00% (a)	None	None	None	None	None	None
Redemption Fee	None	None	None	None	None	None	None	None

Annual fund operating expenses (expenses that you pay each year as a percentage of the value of your investment):

	Class A	Class C	Class I	Class Y	Class R-3	Class R-5	Class R-6	Class RJ RETIREMENT
Management Fees	0.40%	0.40%	0.40%	0.40%	0.40%	0.40%	0.40%	0.40%
Distribution and Service (12b-1) Fees	0.25%	1.00%	0.00%	0.25%	0.50%	0.00%	0.00%	0.00%
Other Expenses	0.28%	0.27%	0.30%	0.36%	0.30%	0.19%	0.19%	0.19% (b)
Total Annual Fund Operating Expenses	0.93%	1.67%	0.70%	1.01%	1.20%	0.59%	0.59%	0.59%
Fee Waiver and/or Expense Reimbursement (c)	(0.13)%	(0.12)%	(0.30)%	(0.21)%	(0.15)%	(0.09)%	(0.19)%	(0.50)%
Total Annual Fund Operating Expenses After Fee Waiver and/or Expense Reimbursement	0.80%	1.55%	0.40%	0.80%	1.05%	0.50%	0.40%	0.09%

(a) If you purchased \$1,000,000 or more of Class A shares of a Carillon mutual fund that were not otherwise eligible for a sales charge waiver and sell the shares within 18 months from the date of purchase, you may pay up to a 1% contingent deferred sales charge at the time of sale. If you sell Class C shares less than one year after purchase, you will pay a 1% CDSC at the time of sale.

(b) Other expenses are estimated for the current fiscal year.

(c) Carillon Tower Advisers, Inc. ("Carillon") has contractually agreed to waive its investment advisory fee and/or reimburse certain expenses of the fund to the extent that annual operating expenses of each class exceed a percentage of that class' average daily net assets through February 28, 2023 as follows: Class A – 0.80%, Class C – 1.55%, Class I – 0.40%, Class Y – 0.80%, Class R-3 – 1.05%, Class R-5 – 0.50%, and Class R-6 – 0.40%. This expense limitation excludes interest, taxes, brokerage commissions, short sale dividend and interest expenses, costs relating to investments in other investment companies (acquired fund fees and expenses), dividends, and extraordinary expenses. With respect to Class RJ RETIREMENT shares, Carillon has contractually agreed to waive and/or reimburse all investment advisory, administrative, distribution, shareholder servicing or any other fees and expenses otherwise payable to Carillon and its affiliates through at least February 28, 2023. The contractual fee waivers can be changed only with the approval of a majority of the fund's Board of Trustees. For each class other than the Class RJ RETIREMENT shares, any reimbursement of fund expenses or reduction in Carillon's investment advisory fees is subject to recoupment by the fund within the following two fiscal years, if overall expenses fall below the lesser of its then-current expense cap or the expense cap in effect at the time of the fee recoupment.

Carillon Reams Core Bond Fund

SUMMARY PROSPECTUS | 3.1. 2022

Expense example | This example is intended to help you compare the cost of investing in the fund with the cost of investing in other mutual funds. The example assumes that you invest \$10,000 in the fund for the time periods indicated and then redeem all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the fund's operating expenses remain the same, except that the example reflects the fee waiver/expense reimbursement arrangement for each share class through February 28, 2023. Your costs would be the same whether you sold your shares or continued to hold them at the end of the period. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

Share Class	Year 1	Year 3	Year 5	Year 10
Class A	\$454	\$648	\$858	\$1,464
Class C	\$258	\$515	\$896	\$1,966
Class I	\$41	\$194	\$360	\$842
Class Y	\$82	\$301	\$537	\$1,217
Class R-3	\$107	\$366	\$645	\$1,441
Class R-5	\$51	\$180	\$320	\$729
Class R-6	\$41	\$170	\$310	\$720
Class RJ RETIREMENT	\$9	\$139	\$280	\$690

Portfolio turnover | The fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when fund shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the fund's performance. During the most recent fiscal year, the fund's portfolio turnover rate was 227% of the average value of its portfolio.

Principal investment strategies | Under normal circumstances, the fund invests at least 80% of its net assets in bonds of varying maturities, including mortgage- and asset-backed securities. The bonds in which the fund may invest also include other fixed income instruments such as debt securities, to-be-announced securities and other similar instruments issued by various U.S. and non-U.S. public- or private-sector entities.

The fund invests primarily in investment grade securities. Investment grade securities include securities rated in one of the four highest rating categories by a nationally recognized statistical rating organization, such as BBB- or higher by Standard & Poor's Financial Services LLC ("S&P®"). If an investment held by the fund is downgraded below investment grade, the fund may either sell or continue to hold the security. In addition, the fund may purchase or sell securities on a when-issued, delayed delivery or forward commitment basis. All securities will be U.S. dollar denominated although they may be securities of foreign issuers. Mortgage-backed securities are pools of mortgage loans that are assembled as securities for sale to investors by various governmental, government-related and private organizations. Asset-backed securities are securities that are secured or "backed" by pools of various types of assets, such as automobile loans, consumer loans, credit cards and equipment leases, on which cash payments are due at fixed intervals over set periods of time.

The fund may invest in derivative instruments, such as futures contracts (including interest rate, bond, U.S. Treasury and fixed income index futures contracts), forwards and credit default swap agreements subject to applicable law and any other restrictions described in the fund's Prospectus or Statement of Additional Information ("SAI"). The fund's investment in credit default swap agreements may include both single-name credit default swap agreements and credit default swap index products, such as CDX index products. The use of these derivative transactions may allow the fund to obtain net long or short exposures to select interest rates, countries, durations or credit risks. These derivatives may be used to enhance fund returns, increase liquidity, manage the duration of the fund's portfolio and/or gain exposure to certain instruments or markets (*i.e.*, the corporate bond market) in a more efficient or less expensive way. The credit default swap agreements that the fund invests in may provide exposure to an index of securities representative of the entire investment grade fixed income market. Derivative instruments that provide exposure to bonds may be used to satisfy the fund's 80% investment policy. The fund's derivatives investments, other than credit default swaps where the fund is a protection seller, are valued at market value. Credit default swaps where the fund is a protection seller are valued at notional value.

The portfolio management team attempts to maximize total return over a long-term horizon through opportunistic investing in a broad array of eligible securities. The investment process combines top-down interest rate management with bottom-up fixed income security selection, focusing on undervalued issues in the fixed income market. The portfolio management team first establishes the portfolio's duration, or interest rate sensitivity. The portfolio management team determines whether the fixed income market is under- or over-priced by comparing current real interest rates (the nominal rates on U.S. Treasury securities less the investment adviser's estimate of inflation) to historical real interest rates. If the current real interest rate is higher than historical norms, the market is considered undervalued and the portfolio management team will manage the portfolio with a duration greater than the benchmark. Duration is a measure used to determine the sensitivity of a security's price to changes in interest rates. The longer a security's duration, the more sensitive it will be to changes in interest rates. If the current real interest rate is less than historical norms, the market is considered overvalued and the portfolio management team will run a defensive portfolio by managing the portfolio with a duration less than the benchmark. The portfolio management team normally

Carillon Reams Core Bond Fund

SUMMARY PROSPECTUS | 3.1. 2022

structures the fund so that the overall portfolio has a duration of between two and seven years based on market conditions. For purposes of calculating the fund's portfolio duration, the fund includes the effect of the derivative instruments held by the fund.

The investment adviser then considers sector exposures. Sector exposure decisions are made on both a top-down and bottom-up basis. A bottom-up issue selection process is the major determinant of sector exposure, as the availability of attractive securities in each sector determines their underweighting or overweighting in the fund subject to sector exposure constraints. However, for the more generic holdings in the fund, such as agency notes and pass-through mortgage backed securities, top-down considerations will drive the sector allocation process on the basis of overall measurements of sector value such as yield spreads or price levels.

Once the investment adviser has determined an overall market strategy, the investment adviser selects the most attractive fixed income securities for the fund. The portfolio managers screen hundreds of securities to determine how each will perform in various interest rate environments. The portfolio managers construct these scenarios by considering the outlook for interest rates, fundamental credit analysis and option-adjusted spread analysis. The portfolio managers compare these investment opportunities and assemble the fund's portfolio from the best available values. The investment adviser constantly monitors the expected returns of the securities in the fund versus those available in the market and of other securities the investment adviser is considering for purchase. The investment adviser's strategy is to replace securities that it feels are approaching fair market value with those that, according to its analysis, are significantly undervalued. As a result of this strategy, the fund's portfolio turnover rate will vary from year to year depending on market conditions and the fund may engage in frequent and active trading.

The fund may lend its securities to broker-dealers and other financial institutions to earn additional income.

Principal risks | The greatest risk of investing in the fund is that you could lose money. The values of most debt securities held by the fund may be affected by changing interest rates and by changes in the effective maturities and credit ratings of these securities. For example, the values of debt securities in the fund's portfolio generally will decline when interest rates rise and increase when interest rates fall. As a result, the fund's net asset value ("NAV") may also increase and decrease. An investment in the fund is not a deposit with a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Investments in the fund are subject to the following primary risks. The most significant risks of investing in the fund as of the date of this Prospectus are listed first below, followed by the remaining risks in alphabetical order. Each risk summarized below is considered a "principal risk" of investing in the fund, regardless of the order in which it appears. Different risks may be more significant at different times depending on market conditions or other factors.

- **Market risk** is the risk that markets may at times be volatile, and the values of the fund's holdings may decline, sometimes significantly and/or rapidly, because of adverse issuer-specific conditions or general market conditions, including a broad stock market decline, which are not specifically related to a particular issuer. These conditions may include real or perceived adverse political, regulatory, market, economic or other developments, such as natural disasters, public health crises, pandemics, changes in federal, state or foreign government policies, regional or global economic instability (including terrorism, territorial disputes and geopolitical risks) and interest, inflation and currency rate fluctuations. These and other conditions may cause broad changes in market value, the general outlook for corporate earnings, public perceptions concerning these developments or adverse investment sentiment generally. Changes in the financial condition of a single issuer, industry or market segment also can impact the market as a whole. In addition, adverse market events may lead to increased redemptions, which could cause the fund to experience a loss when selling securities to meet redemption requests by shareholders. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. Conversely, it is also possible that, during a general downturn in the securities markets, multiple asset classes may decline in value simultaneously. Changes in value may be temporary or may last for extended periods. The financial markets generally move in cycles, with periods of rising prices followed by periods of declining prices. The value of your investment may reflect these fluctuations.

Recent market events risk includes risks arising from current and recent circumstances impacting markets. The impact of the COVID-19 pandemic has been rapidly evolving, and it has resulted, and may continue to result, in significant disruptions to business operations, supply chain disruptions, travel restrictions, closed international borders, enhanced health screenings at ports of entry and elsewhere, disruptions of and delays in healthcare service preparation and delivery, quarantines and stay-at-home orders, cancellations, business closures and layoffs, service and event cancellations, reductions and other changes, and changes in consumer demand, as well as general concern and uncertainty about the state of the global economy. Although promising vaccines and boosters have been released, the timeline for these vaccines becoming significantly widespread in many countries to allow the restoration of full economic activity remains uncertain, and the efficacy of these vaccines may be impacted by further pandemic developments.

The Board of Governors of the Federal Reserve System (also known as "the Fed") has taken numerous measures to address the economic impact of the COVID-19 pandemic, such as the reduction of the federal funds target rate and the introduction of several credit and liquidity facilities, and the U.S. federal government has taken steps to stimulate the U.S. economy, including adopting stimulus packages targeted at large parts of the economy. The effect of these and any future efforts to address the impact of the pandemic may not be known for some time, and it is not known whether and to what extent they will be successful.

Carillon Reams Core Bond Fund

SUMMARY PROSPECTUS | 3.1. 2022

Decisions by the Fed regarding interest rate and monetary policy continue to have a significant impact on securities prices as well as the overall strength of the U.S. economy. Recently, the Fed has signaled that it plans to decrease and unwind its interventions. In 2022, the Fed is anticipated to raise interest rates, which have been at or near historic lows, in part to address an increase in the annual inflation rate in the U.S., which may adversely affect the present value of the Fund's assets and distributions. The impact of any actions that the Fed may take is uncertain and could have an adverse effect on the Fund.

A rise in protectionist trade policies, slowing global economic growth, risks associated with ongoing trade negotiations with China, risks associated with the United Kingdom's departure from the European Union on December 31, 2020, commonly referred to as "Brexit," and the ratification of a trade agreement between the United Kingdom and the European Union, the possibility of changes to some international trade agreements, and tensions or open conflict between and among nations could affect the economies of many countries, including the United States, in ways that cannot necessarily be foreseen at the present time. Economists and others have expressed increasing concern about the potential effects of global climate change on property and security values. Regulatory changes and divestment movements tied to concerns about climate change could adversely affect the value of certain land and the viability of industries whose activities or products are seen as accelerating climate change;

- Interest rate risk is the risk that the value of the fund's investments in fixed income securities will fall when interest rates rise. The effect of increasing interest rates is more pronounced for any intermediate- or longer-term fixed income obligations owned by the fund. For example, if a bond has a duration of seven years, a 1% increase in interest rates could be expected to result in a 7% decrease in the value of the bond. Very low or negative interest rates may magnify interest rate risk. During periods of very low or negative interest rates, the Fund may be unable to maintain positive returns or pay dividends to Fund shareholders. Conversely, interest rates may rise, perhaps significantly and/or rapidly, potentially resulting in substantial losses to the fund;
- Credit risk arises if an issuer or a counterparty, in the case of a derivatives contract, is unable or unwilling, or is perceived as unable or unwilling, to meet its financial obligations or goes bankrupt;
- Callable securities risk arises from the fact that the fund may invest in fixed-income securities with call features. A call feature allows the issuer of the security to redeem or call the security prior to its stated maturity date. In periods of falling interest rates, issuers may be more likely to call in securities that are paying higher coupon rates than prevailing interest rates. In the event of a call, the fund would lose the income that would have been earned to maturity on that security, and the proceeds received by the fund may be invested in securities paying lower coupon rates and may not benefit from any increase in value that might otherwise result from declining interest rates;
- Counterparty risk is the risk that a party or participant to a transaction, such as a broker or a derivative counterparty, will be unwilling or unable to satisfy its obligation to make timely principal, interest or settlement payments or to otherwise honor its obligations to the fund;
- Credit ratings risk is the risk associated with the fact that ratings by nationally recognized rating agencies generally represent the agencies' opinion of the credit quality of an issuer and may prove to be inaccurate;
- Derivatives, such as swap agreements (including credit default swaps and credit default swap index products), futures (including interest rate futures, bond futures, U.S. Treasury futures and fixed income index futures) or forwards, may involve greater risks than if the fund had invested in the reference obligation directly. Derivatives are subject to general market risks, liquidity risks, interest rate risks, and credit risks. Derivatives also present the risk that the other party to the transaction will fail to perform. Derivatives involve an increased risk of mispricing or improper valuation of the derivative instrument, and imperfect correlation between the value of the derivative and the underlying instrument, in which case the fund may not realize the intended benefits. When used for hedging, changes in the value of the derivative may also not correlate perfectly with the underlying asset, rate or index. Derivatives can cause the fund to participate in losses (as well as gains) in an amount that significantly exceeds the fund's initial investment. The derivatives market may be subject to additional regulations in the future.

Swap Agreements. Swaps can involve greater risks than a direct investment in an underlying asset because swaps typically include a certain amount of embedded leverage. If swaps are used as a hedging strategy, the fund is subject to the risk that the hedging strategy may not eliminate the risk that it is intended to offset, due to, among other reasons, the occurrence of unexpected price movements or the non-occurrence of expected price movements. Swaps also may be difficult to value. Swaps may be subject to counterparty risk, credit risk and liquidity risk, especially when traded over-the-counter. In addition to these risks, credit default swaps are subject to the risks associated with the purchase and sale of credit protection;

Futures and Forward Contracts. Futures and forward contracts are subject to counterparty risk, credit risk and liquidity risk. There may at times be an imperfect correlation between the movement in the prices of futures contracts and the value of their underlying instruments or indexes. There are no limitations on daily price movements of forward contracts. There can be no assurance that any strategy used will succeed. Not all forward contracts require a counterparty to post collateral, which may expose the fund to greater losses in the event of a default by a counterparty. There can be no assurance that, at all times, a liquid market will exist for offsetting a futures contract that the fund has previously bought or sold and this may result in the inability to close a futures contract when desired. Interest rate and Treasury futures contracts expose the fund to price fluctuations resulting from changes in interest rates. The fund could suffer a loss if interest rates rise after the fund has purchased an interest rate futures contract or fall after the fund has sold an interest rate futures contract. Similarly, Treasury futures contracts expose the fund to potential losses if interest rates do not move as expected. Fixed income index futures contracts expose the fund to volatility in an underlying securities index;

- Foreign securities risks, which are potential risks not associated with U.S. investments, include, but are not limited to: (1) currency exchange rate fluctuations; (2) political and financial instability; (3) less liquidity; (4) lack of uniform accounting, auditing and financial reporting standards; (5) increased volatility; (6) less government regulation and supervision of foreign stock exchanges, brokers and listed companies; (7) significant limitations on investor rights and recourse; (8) use of unfamiliar corporate organizational structures; (9) unavailable or unreliable public information regarding issuers; and

Carillon Reams Core Bond Fund

SUMMARY PROSPECTUS | 3.1. 2022

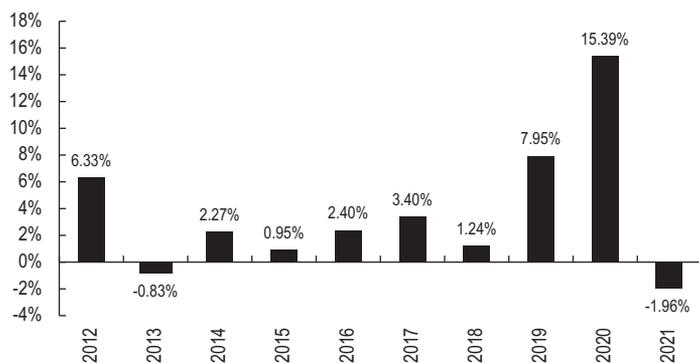

- (10) delays in transaction settlement in some foreign markets. The unavailability and/or unreliability of public information available may impede the fund's ability to accurately evaluate foreign securities. Moreover, it may be difficult to enforce contractual obligations or invoke judicial or arbitration processes against non-U.S. companies and non-U.S. persons in foreign jurisdictions. The risks associated with investments in governmental or quasi-governmental entities of a foreign country are heightened by the potential for unexpected governmental change and inadequate government oversight;
- Hedging risk is the risk that, if the fund uses a hedging instrument at the wrong time or judges the market conditions incorrectly, or the hedged instrument does not correlate to the risk sought to be hedged, the hedge might be unsuccessful, reduce the fund's return, or create a loss. In addition, hedges, even when successful in mitigating risk, may not prevent the fund from experiencing losses on its investments. Hedging instruments may also reduce or eliminate gains that may otherwise have been available had the fund not used the hedging instruments;
 - Income risk is the risk that the fund's income could decline due to falling market interest rates. In a falling interest rate environment, the fund may be required to invest its assets in lower-yielding securities;
 - Issuer risk is the risk that the value of a security may decline for a reason directly related to the issuer, such as management performance, financial leverage and reduced demand for the issuer's goods or services;
 - Leverage risk is the risk that the use of financial instruments to increase potential returns, including the use of when-issued, delayed delivery or forward commitment transactions, and derivatives used for investment (non-hedging) purposes, may cause the fund to be more volatile than if it had not been leveraged. The use of leverage may also accelerate the velocity of losses and can result in losses to the fund that exceed the amount originally invested;
 - LIBOR risk is the risk associated with the fact that certain of the instruments identified in the fund's principal investment strategies have variable or floating coupon rates that are based on ICE LIBOR ("LIBOR"), the Secured Overnight Financing Rate ("SOFR"), Euro Interbank Offered Rate and other similar types of reference rates (each, a "Reference Rate"). These Reference Rates are generally intended to represent the rate at which contributing banks may obtain short-term borrowings within certain financial markets. Most maturities and currencies of LIBOR were phased out at the end of 2021, with the remaining ones to be phased out on June 30, 2023. These events and any additional regulatory or market changes may have an adverse impact on the fund or its investments, including increased volatility or illiquidity in markets for instruments that rely on LIBOR. There remains uncertainty about the nature of any replacement rate and the impact of the transition from LIBOR on the fund and the financial markets generally. SOFR has been selected by a committee established by the Board of Governors of the Federal Reserve System and the Federal Reserve Bank of New York to replace LIBOR as a Reference Rate in the United States. Other countries have undertaken similar initiatives to identify replacement Reference Rates for LIBOR in their respective markets. However, there are obstacles to converting certain existing investments and transactions to a new Reference Rate, as well as risks associated with using a new Reference Rate with respect to new investments and transactions. The transition process, or the failure of an industry to transition, could lead to increased volatility and illiquidity in markets for instruments that currently rely on LIBOR to determine interest rates and a reduction in the values of some LIBOR-based investments, all of which could impact the fund. At this time, it is not possible to completely identify or predict the effect of any transition, establishment of alternative Reference Rates or other reforms to Reference Rates that may be enacted in the UK or elsewhere. In addition, any substitute Reference Rate and any pricing adjustments imposed by a regulator or by counterparties or otherwise may adversely affect the fund's performance and/or NAV;
 - Liquidity risk is the possibility that, during times of widespread market turbulence, trading activity in certain securities may be significantly hampered. The fund could lose money if it cannot sell a security at the time and price that would be most beneficial to the fund. The fund may be required to dispose of investments at unfavorable times or prices to satisfy obligations, which may result in losses or may be costly to the fund. Market prices for such securities may be volatile;
 - Maturity risk is the risk associated with the fact that the fund will invest in fixed income securities of varying maturities. Generally, the longer a fixed income security's maturity, the greater the interest rate risk. Conversely, the shorter a fixed income security's maturity, the lower the risk;
 - Mortgage- and asset-backed security risk arises from the potential for mortgage failure, particularly during periods of market downturn, premature repayment of principal, or a delay in the repayment of principal, and can increase in an unstable or depressed housing market. In a to-be-announced ("TBA") mortgage-backed transaction, the fund and the seller agree upon the issuer, interest rate and terms of the underlying mortgages. However, the seller does not identify the specific underlying mortgages until it issues the security. TBA mortgage-backed securities increase interest rate risks because the underlying mortgages may be less favorable than anticipated by the fund;
 - Portfolio turnover risk is the risk that performance may be adversely affected by the high rate of portfolio turnover that can be caused by the fund engaging in active and frequent trading, which generally leads to greater transaction costs;
 - Prepayment risk is the risk that the principal amount of a bond may be repaid prior to the bond's maturity date. Due to a decline in interest rates or excess cash flow into the issuer, a debt security may be called or otherwise converted, prepaid or redeemed before maturity. If this occurs, no additional interest will be paid on the investment. The fund may have to reinvest the proceeds in another investment at a lower rate, may not benefit from an increase in value that may result from declining interest rates, and may lose any premium it paid to acquire the security. The rate of prepayments tends to increase as interest rates fall, which could cause the average maturity of the portfolio to shorten. Extension risk is the risk that a decrease in prepayments may, as a result of higher interest rates or other factors, result in the extension of a security's effective maturity, increase the risk of default and delayed payment, heighten interest rate risk and increase the potential for a decline in its price. In addition, as a consequence of a decrease in prepayments, the amount of principal available to the fund for investment would be reduced;
 - Redemption risk is the risk that, due to a rise in interest rates or other changing government policies that may cause investors to move out of fixed income securities on a large scale, the fund may experience periods of heavy redemptions that could cause the fund to sell assets at inopportune times or at a loss or depressed value;

Carillon Reams Core Bond Fund

SUMMARY PROSPECTUS | 3.1. 2022

- Securities lending risk is the risk that, if the fund lends its portfolio securities and receives collateral in the form of cash that is reinvested in securities, those securities may not perform sufficiently to cover the return collateral payments owed to borrowers. In addition, delays may occur in the recovery of securities from borrowers, which could interfere with the fund's ability to vote proxies or to settle transactions and there may be a loss of rights in the collateral should the borrower fail financially;
- U.S. government securities and government-sponsored enterprises risk arises because a security backed by the U.S. Treasury or the full faith and credit of the United States is guaranteed by the applicable entity only as to the timely payment of interest and principal when held to maturity. The market prices for such securities are not guaranteed and will fluctuate. Securities held by an underlying fund that are issued by government-sponsored enterprises, such as the Federal National Mortgage Association ("Fannie Mae"), the Federal Home Loan Mortgage Corporation ("Freddie Mac"), Federal Home Loan Banks, Federal Farm Credit Banks, and the Tennessee Valley Authority are not guaranteed by the U.S. Treasury and are not backed by the full faith and credit of the U.S. Government. U.S. Government securities and securities of government sponsored enterprises are also subject to credit risk, interest rate risk and market risk;
- U.S. Treasury obligations risk is the risk that the value of U.S. Treasury obligations may vary due to changes in interest rates. In addition, changes to the financial condition or credit rating of the U.S. government may cause the value of the fund's investments in obligations issued by the U.S. Treasury to decline. Certain political events in the U.S., such as a prolonged government shutdown, may also cause investors to lose confidence in the U.S. government and may cause the value of U.S. Treasury obligations to decline; and
- Valuation risk arises because the securities held by the fund may be priced by an independent pricing service and may also be priced using dealer quotes or fair valuation methodologies in accordance with valuation procedures adopted by the fund's Board. The prices provided by the independent pricing service or dealers or the fair valuations may be different from the prices used by other mutual funds or from the prices at which securities are actually bought and sold.

Performance | The bar chart that follows illustrates annual fund returns for the periods ended December 31. The table that follows compares the fund's returns for various periods with benchmark returns. This information is intended to give you some indication of the risk of investing in the fund by demonstrating how its returns have varied over time. The bar chart shows the fund's Class I share performance from one year to another. The Class I and Class Y shares of the fund have adopted the performance history and financial statements of the Institutional Class and Class Y shares, respectively, of the fund's predecessor. Each of the fund's share classes is invested in the same portfolio of securities, and the annual returns would have differed only to the extent that the classes do not have the same sales charges and expenses. Performance information for the Class RJ RETIREMENT shares of the fund is not provided because the Class RJ RETIREMENT shares had not commenced operations prior to the date of this Prospectus. The fund's past performance (before and after taxes) is not necessarily an indication of how the fund will perform in the future. To obtain more current performance data as of the most recent month-end, please visit our website at carillontower.com.

During 10 year period (Class I shares):

	Return	Quarter Ended
Best Quarter	6.52%	June 30, 2020
Worst Quarter	(3.71)%	March 31, 2021

Carillon Reams Core Bond Fund

SUMMARY PROSPECTUS | 3.1. 2022

Average annual total returns (for the periods ended December 31, 2021):

Fund return (after deduction of sales charges and expenses)

Share Class	Inception Date	1-yr	5-yr	10-yr	Lifetime (if less than 10 yrs)
Class I – Before Taxes	2/23/01	(1.96)%	5.03%	3.61%

Bloomberg Barclays U.S. Aggregate Bond Index	(1.54)%	3.57%	2.90%	3.57%

After-tax returns are calculated using the historically highest individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown. After-tax returns shown are not relevant to investors who hold their fund shares through tax-deferred arrangements, such as a 401(k) plan or individual retirement account ("IRA"). After-tax returns are shown for Class I only and after-tax returns for Class A, Class C, Class Y, Class R-3, Class R-5, Class R-6 and Class RJ RETIREMENT will vary. The return after taxes on distributions and sale of fund shares may exceed the return before taxes due to an assumed tax benefit from any losses on a sale of fund shares at the end of the measurement period.

Investment Adviser | Carillon Tower Advisers, Inc. is the fund's investment adviser.

Subadviser | Scout Investments, Inc., through its Reams Asset Management division, serves as the subadviser to the fund.

Portfolio Managers | Mark M. Egan, CFA®, has served as the Lead Portfolio Manager of the fund and Todd C. Thompson, CFA® and Clark W. Holland, CFA®, have served as Portfolio Co-Managers of the fund since the fund's inception in 2017. Jason J. Hoyer, CFA®, has served as Portfolio Co-Manager of the fund since April 2018. Tilak "Dimitri" Silva, CFA®, has served as Portfolio Co-Manager of the fund since March 2021. Messrs. Egan, Thompson, Holland, Hoyer and Silva are jointly and primarily responsible for the day-to-day management of the fund. Mr. Egan served as the Lead Portfolio Manager of the fund's predecessor and Mr. Thompson served as Portfolio Co-Manager of the fund's predecessor from its inception in 2001 to 2017. Mr. Holland served as Portfolio Co-Manager of the fund's predecessor from 2014 to 2017.

Purchase and sale of fund shares | You may purchase, redeem, or exchange Class A, C, I and Y shares of the fund on any business day through your financial intermediary, by mail at Carillon Family of Funds, c/o U.S. Bank Global Fund Services, P.O. Box 701, Milwaukee, WI 53201-0701 (for regular mail) or 615 East Michigan Street, Third Floor, Milwaukee, WI, 53202 (for overnight service), or by telephone (800.421.4184). In Class A and Class C shares, the

Carillon Reams Core Bond Fund

SUMMARY PROSPECTUS | 3.1. 2022

minimum purchase amount is \$1,000 for regular accounts, \$500 for retirement accounts and \$50 through a periodic investment program, with a minimum subsequent investment plan of \$50 per month. In Class Y shares, the minimum purchase amount is \$1,000 for regular accounts, \$100 for retirement accounts and \$100 through a periodic investment program, with a minimum subsequent investment plan of \$50 per month. For individual investors, the minimum initial purchase for Class I shares is \$10,000, while fee-based plan sponsors set their own minimum requirements. Class R-3, Class R-5 and Class R-6 shares can only be purchased through a participating retirement plan and the minimum initial purchase for Class R-3, Class R-5 and Class R-6 shares is set by the plan administrator. Class RJ RETIREMENT shares are offered to and may only be purchased or redeemed through eligible retirement accounts, including IRAs, or eligible retirement plans (and their participants) that are clients of Raymond James & Associates, Inc., Raymond James Financial Services, Inc., and Raymond James Financial Services Advisors, Inc., and their affiliates (collectively "Raymond James") as well as clients of plan administrators and recordkeepers who service Raymond James customers under separate contracts for services and fees. While there are no required minimum or maximum investments in the Class RJ RETIREMENT shares, plan administrators or financial intermediaries may impose minimum or maximum investment requirements. Additional or different conditions on purchases and redemptions also may apply.

Tax information | The dividends you receive from the fund will be taxed as ordinary income or net capital gain (i.e., the excess of net long-term capital gain over net short-term capital loss) unless you are investing through a tax-deferred arrangement, such as a 401(k) plan or an IRA, in which case you may be subject to federal income tax on withdrawals from the arrangement.

Payments to broker-dealers and other financial intermediaries | If you purchase shares of the fund through a broker-dealer or other financial intermediary (such as a bank), the fund and its related companies may pay the intermediary for the sale of fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the fund over another investment. Ask your salesperson or visit your financial intermediary's website for more information.
